

Create a simple beginner-friendly web application using only HTML, CSS, and JavaScript.

The app should help a student generate a simple personalized study plan.

Requirements:

1. Technology

- Use plain HTML, CSS, and JavaScript only.
- Do not use React, Next.js, backend, database, or external libraries.
- Put everything in one folder.
- Create three files:
 - index.html
 - style.css
 - script.js

2. App Pages / Screens

The app should have the following screens:

A. Home Page

- Show the title: "Study Plan Generator"
- Show a short description: "Create a simple study plan based on your topic and difficulty level."
- Show a button: "Open App"
- When the user clicks "Open App", show the form screen.

B. Form Page

- Show a form with:
 - Topic input box
 - Label: "Enter Topic"
 - Example placeholder: "Python, Algebra, Biology, Web Development"
 - Difficulty dropdown
 - Label: "Select Difficulty"
 - Options:
 - Beginner
 - Intermediate
 - Advanced
 - Button:
 - Text: "Click to Create"
- When the user clicks the button:
 - Validate that the topic is not empty.
 - If the topic is empty, show a friendly error message.
 - If the topic is filled, generate a simple study plan and show the data page.

C. Data Page

- Show the title: "Your Personalized Study Plan"
- Display:

- Topic
- Difficulty
- Recommended learning goal
- 3-step study plan
- Suggested practice activity
- Add a button: "Create Another Plan"
- When the user clicks it, return to the form page and clear the previous input.

3. Workflow

The user workflow should be:

1. Start on the main input screen.
 2. Click "Open App".
 3. Fill out the study preference form.
 4. Click "Click to Create".
 5. Receive and review the personalized data page.
- ### 6. JavaScript Logic

The JavaScript should:

- Hide and show different screens without reloading the page.
- Read the topic and difficulty values from the form.
- Generate different study plan text based on difficulty:
 - Beginner: simple explanation, basic goals, easy practice.
 - Intermediate: more structured plan, small project or exercises.
 - Advanced: deeper learning, challenge project, research or real-world application.
- Display the generated result on the data page.

5. Design Requirements

Use clean, student-friendly styling:

- Centered layout
- Card-style sections
- Clear buttons
- Light background
- Good spacing
- Large readable text
- Mobile-friendly design

6. Code Quality

- Use clear class names and IDs.
- Add helpful comments in the JavaScript.
- Make the code easy for middle school and high school students to understand.
- Keep the app simple but complete.
