

Create a simple Wikipedia-style web application for beginner students using only HTML, CSS, and JavaScript.

Project Name: MiniWiki

Goal: Build a simple website where users can browse short encyclopedia-style articles, search for articles, and click links between articles.

Technology Requirements:

- Use only HTML, CSS, and vanilla JavaScript
- No backend
- No database
- No frameworks
- Store sample article data directly inside JavaScript as an array of objects

Main Features:

1. Homepage

- Show the title "MiniWiki"
- Show a short description: "A simple student-built encyclopedia"
- Show a list of available articles

2. Article Page Area

- When the user clicks an article title, display the article content on the page
- Each article should include:
 - Title
 - Short introduction
 - Main content sections
 - Related article links

3. Search Feature

- Add a search box at the top
- When the user types a keyword, filter articles by title or content
- Show matching article titles
- If no result is found, show "No articles found."

4. Related Links

- At the bottom of each article, show related article titles
- Clicking a related article should open that article

5. Simple Wikipedia Style

- Use a clean layout similar to Wikipedia
- Left sidebar with article list
- Main content area on the right
- White background
- Simple fonts

- Clear headings
- Blue links
- Light gray borders

6. Sample Articles Create at least 6 sample articles:

- Artificial Intelligence
- Web Development
- JavaScript
- Robotics
- Climate Change
- Space Exploration

7. File Structure Create the following files:

- index.html
- style.css
- script.js

8. Code Quality

- Add comments so beginners can understand the code
- Use simple variable names
- Keep the JavaScript easy to read
- Make the design responsive for laptops and tablets

9. Extra Feature Add a "Random Article" button that opens one random article.

10. Final Output The app should run by simply opening index.html in a browser.
